### KNOW HOW & EXPERIENCE

#### Functional

- Complex projects management
- Crisis management
- Strategic marketing and international trade
- Change management
- Prospective
- Technology transfer and innovation
- Mediation
- General management

#### Sector of activity

- B2B
- Chemicals
- Process industries
- IT and process control
- Research and teaching

Michel Judkiewicz, MSc Electrical and Mechanical engineering ULB (1971) also got a degree in general management from the CEDEP (Insead) in 1987 and spent 25 years of his career in large multinational companies. As a matter of fact, after one year as assistant-professor at the Brussels Free university and 3 years in industrial IT and organization at Sobemap SA, he successively spends 3 years as a process control engineer with Honeywell in Europe, 3 other years at Honeywell USA as senior research engineer before joining UCB (ex Union Chimique Belge) in 1982. He will then successively work in production and control engineering, strategic marketing, managing of a joint venture, assisting the general manager, business IT and as general manager of the fine chemicals division while being on the board of directors of several companies of the UCB group.

He will then leave UCB because of the group's disinvestment in chemicals and creates his own consulting company in 1997, active in industrial strategy, business development, project management and organization.

Since then, he has been busy with clients like UCB, Proviron, Contichim, FNRS, (Fonds national de la recherche scientifique), the rector office of Brussels free university, Tevan and many more. He is master of conferences at the Brussels University and Senior Associate at Management Center Europe.
